A	BOUNDARY AREA TROLL CATCH, 1996-1998	A.1.

EXECUTIVE SUMMARY

This report reviews:

- 1) catch, effort, and management actions in the 1998 Northern Boundary Area troll and net fisheries of southern Southeast Alaska Districts 101 to 106 and northern British Columbia Areas 1, 3, 4, and 5;
- 2) management performance relative to Treaty requirements;
- 3) historical catches by area, gear (purse seine, gillnet, toll, trap), year, week, and species (sockeye, pink, chum, coho, and chinook salmon);
- 4) historical escapements; and,
- 5) preliminary expectations and fishing plans for 1999.

In southern Southeast Alaska, the run of pink salmon was slightly above average. The all-gear harvest was 23.8 million and the escapement indices were above 1990-1997 averages in all but Districts 105 and 108. Escapements were particularly strong in Portland Canal, West Behm Canal, and Moria Sound. The wild and hatchery chum run was exceptionally strong. Harvests totalled 5.8 million and escapements of both summer and fall runs were generally well distributed and at high levels. The District 102 fall chum harvest of 0.56 million was over twice the 1994 record. The coho run was reasonably strong. Harvests totalled 1.1 million and escapements were within goal ranges for the Hugh Smith Lake indicator stock and peak counts exceeded 1987-1997 averages in most of the 15 other index systems in District 101. The sockeye harvest of 0.9 million was below recent year averages as was the sockeye escapement into Hugh Smith and McDonald Lakes.

In Northern British Columbia pink runs were well below expected levels in all Statistical Areas: 140,400 pink salmon were harvested in the Area 1 net fishery, 356,905 pink salmon were harvested in Canadian Area 3, 17,223 in Area 4 and 1,470 in the Area 5 fishery. Pink escapements for most Skeena and Nass systems were much lower than target levels. Sockeye runs were also below expected levels, 106,534 were harvested in Area 3 and 84,803 in Area 4. The Nass escapement levels for sockeye were near target. Skeena sockeye escapements were below target levels for both enhanced and wild stocks. Chum runs in Areas 3, 4 and 5 were well above average with net harvests of 246,220 in Area 3, 11,136 in Area 4 and 1,158 in Area 5. Escapements of summer chum salmon were greatly improved over recent levels in all areas with many systems receiving near target escapements. Extensive management actions were taken this year in northern British Columbia commercial, sport, and first nation's fisheries to reduced coho exploitations, particularly in areas where Upper Skeena stocks are most prevalent. Non-retention and non-possession of coho was in effect in the limited areas opened for troll and net fishing in 1998.

For the 1998 fishing season, no agreement had been reached between Canada and the United States on the conduct of the Alaska District 104 purse seine fishery during Statistical Weeks 28-30 (July 5-25). Alaska Department of Fish and Game's management intent was to allow fishermen the opportunity to harvest domestic stocks, to allow for standard fishing periods, to distribute the fishing fleet, and to co-ordinate purse seine fishing opportunities throughout Southeast Alaska. In order to achieve these objectives pre-Week 31 openings in District 104 were based on the observed abundance of salmon and the number of

vessels fishing in the district. The pre-season expectation was that the fishing time allowed would not exceed the amount allowed in District 101 and 102 nor exceed the 1985-96 average pre-Week 31 hours fished in District 104. Early season sockeye and pink salmon catches were below 1985-1997 averages. The low catch rate of sockeye salmon was consistent with other fishery indicators that Skeena sockeye runs were relatively poor. Consequently, District 104 was managed conservatively in hopes of shifting effort to Districts 101 and 102 where pink salmon were relatively more abundant. Prior to Week 31, when sockeye are historically most abundant, District 104 was open a total of only 32 hours versus 75 hours in Districts 101 and 102. The number of boats fishing in District 104 fell from 57 initially to 38 in Week 30 while in Districts 101 and 102 boats fishing rose from 54 to 144 during the same period. The catch of sockeye salmon in District 104 prior to Week 31 totalled 17 thousand fish or about 10% of the 1985-1997 average for this period.

In the Alaska District 101-11 (Tree Point) gillnet fishery the Pacific Salmon Treaty calls for an average annual harvest, beginning in 1985, of 130,000 sockeye salmon. In 1998, the Tree Point gillnet fishery was opened for three 4-day fishing weeks beginning June 21 (Week 26). In these three initial openings sockeye catch was above 1985-1997 averages, chum catch was much higher than average, and the number of boats fishing the district was a little below average. Nevertheless, fishing time was reduced to a 2.5 day (60 hour) opening in Week 29 in response to Canadian concerns over lagging sockeye escapements in the Nass River. The fishery was managed according to the Pink Salmon Management Plan from Week 30 through Week 35. During this time abundance of pink, chum, and coho salmon were well above Treaty averages and sockeye abundance and effort were below average. In Weeks 30 and 31, the southern portion of the Tree Point area was closed to protect Nass River sockeye after Canadian Department of Fisheries and Ocean biologists determined that escapement levels were not being met. Starting on August 30 (Week 36) the fishery was managed on the strength of the fall chum and coho returns. Chum abundance was above average and coho was were well above average. Effort remained a little below average. A total of 160,506 sockeye salmon were harvested in the District 101 drift gillnet fishery in 1998 bringing the 1985-1998 average annual harvest of sockeye salmon to 167,868.

Under the Pacific Salmon Treaty the outside portions of Canada's Statistical Areas 3 and 5 are to be managed such that an average annual pink harvest of 900,000 is achieved. In 1998, 60,696 pinks were harvested in Management Units 3(1-4). The current average annual pink harvest from 1985-1998 in the treaty area is 1,506,749.

In 1998 there were no specific annex arrangements under the Pacific Salmon Treaty governing the conduct of the Canadian Area 1 troll fishery for pink salmon. The Area 1 troll fishery was closed for the majority of the season with only a small area open from mid-September to early October to harvest chinook salmon. During this time no pink salmon were harvested in this fishery. The AB-line area was closed to trolling for the entire season.

Strong harvests are forecasted for Southeast Alaska pink salmon in 1999. The Alaska Department of Fish and Game forecasts a harvest of between 31 and 51 million pink salmon in all of Southeast Alaska in 1999. Separate forecasts for northern and southern Southeast were not made. Returns of coho, sockeye, and chum salmon are projected to be strong, comparable to the levels observed in recent years.

In Canada, average Nass sockeye returns and very poor Skeena sockeye returns are anticipated in 1999, while below average pink returns are predicted throughout Northern British Columbia.

INTRODUCTION

This report reviews the 1998 Boundary Area pink, chum and sockeye salmon fisheries of southern Southeast Alaska and Northern British Columbia and outlines preliminary expectations and fishing plans for 1999. The document is submitted to the Pacific Salmon Commission as required in Article IV of the Pacific Salmon Treaty. Weekly catch and effort data is provided by district/area, gear, and species (sockeye, pink, chum, coho, and chinook) for Northern Boundary Area fisheries from 1960 to 1998. Subarea catch data is also presented for sockeye, pink and chum salmon for Canadian Areas (3-1), 3(2-4) and 3(7-17). Canadian catch data for 1998 is based on hail surveys as saleslip data is preliminary at this time. Maps showing the statistical fishing districts/areas for Southeast Alaska and Northern British Columbia are provided in Figures 1 to 5.

SOUTHERN SOUTHEAST ALASKA

1998 Salmon Forecast

Formal forecasts are not made for species of salmon other than pink salmon in Southeast Alaska. Alaska Department of Fish and Game (ADF&G) forecasted a strong harvest of between 36 and 50 million pink salmon in all of Southeast Alaska in 1998. This forecast was supported by results from ADF&G's regression model, which uses brood year escapement indices and winter air temperatures as independent variables, as well as management and fleet observations.

While formal forecasts are not made for species other than pink salmon in Southeast Alaska returns of sockeye, chum, and coho salmon were projected to be comparable to the levels observed in recent years. A strong return of McDonald Lake sockeye was forecast.

Review of the 1998 Fishing Season

Commercial fisheries harvested approximately 31.6 million salmon in southern Southeast Alaska in 1998, this includes purse seine, drift gillnet, troll, and hatchery harvests from Districts 101 to 108, 150 and 152, and the salmon harvests in the Annette Island Fishery Reserve.

This harvest is above the average since statehood (1960-1997) of 19.2 million. The harvest was comprised of 23.8 (75.1%) million pink, 5.8 (18.3%) million chum, 0.9 (3.0%) million sockeye, 1.1 (3.4%) million coho, and 38 (0.1%) thousand chinook salmon. Historical catch and effort data by district, gear, species, and week is presented in Tables 1-66.

The pink salmon harvest in all of Southeast Alaska of 42.5 million was below the 10-year (1988-1997) average harvest of 45.6 million but within with the preseason forecast of 36 to 50 million.

District 104 Purse Seine Fishery

For the 1998 purse seine fishing season, no agreement had been reached with Canada on the conduct of the District 104 fishery. Past annex arrangements had governed the conduct of the fishery early in the season, pre-Statistical Week 31, when Nass and Skeena sockeye salmon are usually most abundant in the district and prior to the main body of the pink salmon run to southern Southeast Alaska. The management intent in 1998 was to maintain early season harvest and stock assessment opportunities, to manage based on the observed abundance of salmon, to allow fishermen the opportunity to harvest domestic stocks, and to coordinate purse seine fishing opportunities throughout Southeast Alaska in an effort to promote distribution of the fleet and an orderly fishery.

In order to achieve these objectives, pre-Week 31 openings in District 104 were based on the observed run strength of salmon and the number of vessels fishing in the district. Pre-season expectations for the 1998 season were that the fishing time would not exceed that allowed in Districts 101 and 102 nor exceed the 1985-97 average hours fished in District 104 prior to Statistical Week 31.

In 1998 there were three openings prior to Statistical Week 31, an 8-hour opening on July 5 (Week 28), a 12-hour opening on July 12 (Week 29) and a 12-hour opening on July 19 (Week 30). During these three openings, 57, 35, and 38 boats harvested a total of 17,394 sockeye, 72,565 pink, 87,866 chum, and 20,906 coho salmon. Catch rates and catches of pink and sockeye salmon were below 1985-1997 averages. The low catch rate on sockeye salmon was consistent with other fishery indicators in the northern boundary area that Skeena sockeye runs were relatively poor. Consequently, District 104 was managed conservatively and the hours opened in these early weeks were much less than that fished in Districts 101 and 102 which had five 15-hour seine openings in Weeks 28-30 and relatively good catch rates for pink salmon.

The average number of hours, boats, days, and boat-days fished pre-Week 31 in years 1985-1998 is down 43 to 69% compared to the 1980-1984 period. The sockeye harvest is also down 15% despite an increase in sockeye availability in recent years; the average sockeye catch-per-boat-day has increased 180% since 1984.

After Week-30, District 104 was opened the same dates and hours as the purse seine openings in Districts 101, 102, and 103. Fifteen and 39-hour openings were fished in both Weeks 31 and 32 followed by five 39-hour openings in Weeks 33-35 fished on a two-day-on and two-day-off schedule. District 104 harvests in 1998 totaled 5,816,000 pink, 487,000 sockeye, 383,000 chum, 103,000 coho, and 7,000 chinook salmon. Catch rates, and consequently effort, were relatively lower in District 104 than in recent years. Over 40% of the 487,000-sockeye harvest were taken in the 39-hour opening on August 5-6.

Districts 101, 102, and 103 Purse Seine Fisheries

With the exception of a sockeye salmon fishery targeting Alaskan McDonald Lake stocks in the upper West Behm Canal section of District 101, the southern Southeast Alaska inside purse seine fishery was managed on pink salmon returns to Districts 101 through 107. The 1998 purse seine fishery in southern Southeast Alaska was characterized by average to slightly above average returns of pink salmon to most areas. Distribution of the return was very even between most inside districts.

The District 101 purse seine fishery opened for 15 hours on July 5 (Statistical Week 28). During that opening 32 boats caught 20,000 pink and 16,000 chum salmon. Over the next three weeks, District 101 was opened for five 15-hour openings. Catches of pink salmon during relatively low during the first three openings, however catches started to increase during the July 19th opening. Effort levels increased steadily during July with a peak effort for the season occurring on July 26 when 105 purse seine boats fished in District 101. Escapement levels to most early run pink Boca de Quadra were good, escapements to Smeaton Bay (Wilson and Blossom Rivers) were below historical levels during the early season. On July 29 District 101 was opened for 39 hours for the first time. However, catches did not warrant another 39 hour opening so the next opening on August 2 was only for another 15 hours.

Beginning on August 5 (Statistical Week 31) District 101, along with the other inside districts, was opened for 2 day on/2 day off fishing schedule through the end of the season on August 29. Both catches and effort remained very close to historical levels (1985 through 1997) in District 101. Little or no effort was observed in the traditional purse seining areas near the entrance of Smeaton Bay near Point Alava and Point Sykes. Starting with the July 26 opening most purse seine effort in District 101 was along the Gravina Island shore. The season came to a close after a 39-hour opening on August 29.

In 1998 there were two openings to target McDonald Lake sockeye salmon in upper West Behm Canal in District 101. During these openings, each for 15 hours on July 26 and August 2, approximately 16,000 sockeye were harvested by 30 purse seine vessels. McDonald Lake had an escapement of 58,000 sockeye which is within the lower boundary of the escapement goal range.

Also, in 1998 the Neets Bay Special Harvest Area was opened to a rotational terminal fishery to the purse seine and gill net fleet. This was due to the larger than expected return of summer chum to SSRAA's Neets Bay Hatchery. During those openings 1,080,000 summer chum were harvested by approximately 50 purse seine boats. This was the first time Neets Bay was opened to a fishery other than hatchery cost recovery since the mid-1980's.

For the season 5,640,000 pink, 1,035,000 chum, 70,000 sockeye, and 58,000 coho salmon were harvested in District 101 common property fishery.

The District 101 pink salmon index escapement was 3.5 million fish is within the escapement goal range and slightly above the median index goal of 3.2 million for the district.

District 102 purse seining began on July 5 (Statistical Week 28) with a 15 hour opening. The harvest of pink salmon, along with purse seine effort levels, were below recent year's averages during the first portion of the season. However, summer chum catches in lower District 102 were at very high levels, mostly due to the contribution of enhanced fish returning to the SSRAA's remote release site at Kendrick Bay. Even with lower than average pink salmon catches by early August escapement levels of pink salmon into Kasaan Bay and Cholmondeley Sound were at very high levels so most of upper Clarence Strait shoreline of District 102 was open to seining. Moira Sound's escapements lagged and during Statistical Week 34 portions of lower District 2 were closed to seining.

Purse seine catches of summer chum in SSRAA's Kendrick Bay terminal area fishery was 363,000 summer chum salmon.

For the season 4,615,000 pink, 1,153,000 chum, 29,000 sockeye, and 71,000 coho were harvested in the common property purse seine fishery District 2. Of the 1,153,000 chum salmon harvested 550,000 came from the directed fall chum fishery in the Cholmondeley Sound area.

The District 102 pink salmon index escapement of 1.25 million fish within the escapement goal range and slightly above the median index goal of 1.06 million pink salmon.

District 103 purse seine fishery was opened for an initial 15-hour fishing period on July 26 (Statistical Week 31), however, no boats delivered fish from the district. For the remainder of August the District 103 fishery experienced slightly above catches of pink salmon and like most of Southern Southeast Alaska chum catches were at near record levels. Escapement levels looked to be well distributed throughout most of the district. The peak harvest in the district occurred during the opening of August 17 when 63 boats harvested approximately 1,060,000 pink salmon.

For the season, 4,015,000 pink, 17,500 sockeye, 193,000 chum, and 46,000 coho were harvested in District 103.

The District 103 pink salmon index escapement of 3.1 million fish is within the escapement goal range and slightly below the median index goal of 3.3 million pink salmon.

Tree Point Drift Gillnet Fishery

The Tree Point drift gillnet fishery opens by regulation on the third Sunday of June. During the early stages of the fishery, management is based on the run strength of Alaska wild stock chum and sockeye salmon and on the strength of the Nass River sockeye salmon. Beginning in the third week of July, when pink salmon stocks begin to enter the fishery in large numbers, management emphasis shifts by regulation to that species. The District 101 Pink Salmon Management Plan sets gillnet fishing time at Tree Point in relation to the District 101 purse seine fishing time when both fleets are concurrently harvesting the same pink salmon stocks. The U.S./Canada Pacific Salmon Treaty calls for an average annual harvest of 130,000 sockeye salmon.

In 1998, the Tree Point gillnet fishery was opened for three 4-day fishing weeks beginning June 21 (Week 26). Sockeye harvests during these three openings were above 1985-1997 averages, chum harvests were much higher than average, and the number of boats fishing the district, was a little below average. Nevertheless, fishing time was reduced to a 2.5 day (60 hour) opening in Week 29 in response to Canadian concerns over lagging sockeye escapements in the Nass River.

The fishery was managed according to the Pink Salmon Management Plan from Week 30 through Week 35. A 4-day opening was fished in Week 30 followed by 5-day openings in Weeks 31-35. During this time harvests of pink, chum, and coho salmon were well above Treaty averages and sockeye harvest and effort were below average. In Weeks 30 and 31, the southern portion of the Tree Point area was closed to protect Nass River sockeye after Canadian Department of Fisheries and Ocean biologists determined that escapement levels were not being met.

Starting on August 30 (Week 36) and continuing through the close of the fishery on September 22 (Week 39), the fishery was managed on the strength of the fall chum and coho returns. Chum catches were above average and coho catches were well above average. Three-day fishing periods were allowed in each of these four weeks. Effort remained a little below average.

A total of 160,506 sockeye salmon were harvested in the District 101 drift gillnet fishery in 1998. This brings the 1985-1998 average annual harvest of sockeye salmon to 167,868.

Pink, Sockeye, Chum, and Coho Salmon Escapements

Pink salmon escapement indices were well above the 1990-1997 average in most stock groups in Districts 101-104. Escapement indices for Portland Canal, West Behm Canal, and Moria Sound stock groups were particularly strong. Escapement indices to the 16 stock groups in Districts 105-108 were mixed - counts were above average in eight stocks and below average in eight stocks. When summed across Districts the 101-108, escapement indices totaled 9.6 million and exceeded the 6.0 – 9.0 million goal range.

Programs to estimate escapements of sockeye salmon were only in place for three systems in southern Southeast Alaska in 1998, Hugh Smith, McDonald, and Salmon (Karta) Lakes. The sockeye escapement to Hugh Smith Lake was 1,138 based on weir and mark-recapture estimates. The escapement of sockeye salmon into McDonald Lake was estimated to be 57,557 based on expanded foot surveys. Approximately 16,000 McDonald Lake sockeye were harvested in a directed seine fishery in Yes Bay. Salmon Lake escapement was estimated at 4,491 based on a mark-recapture study and expanded foot surveys. There was a relatively poor return of three-ocean sockeye in all three systems this year.

Escapements of summer and fall run chum salmon were generally well distributed and at high levels throughout southern Southeast Alaska. Wild stock chum escapement counts were the highest on record in many mainland District 101 streams. The District 102 fall chum harvest of 550,000 was over twice the

1994 record and escapements were correspondingly strong. Returns of hatchery chum salmon to Nakat, Neets, and Kendrick Bays were all at historical high levels.

Aerial and foot surveys for coho salmon indicated escapements were within acceptable ranges throughout southern Southeast Alaska. The Ketchikan area coho escapement index of 8,022 was above the 1987-1997 average of 7,701. Survey conditions were adequate for 13 of the 15 streams in the index. The escapement to Hugh Smith Lake was 893 which, although lower than the 1982-1997 average of 1,248, was in the upper portion of the 500-1,100 spawner goal range.

Coded Wire Tag Releases

Coded wire tag mark-recovery programs provide information on migration routes and fishery contributions for hatchery and wild stocks in Southeast Alaska. Preliminary releases of coded wire tagged salmon in Southeast Alaska in 1998 are listed in Table 70.

Management Performance Relative to Treaty Requirements

District 104 Purse Seine Fishery

For the 1998 fishing season, no agreement had been reached between Canada and the United States on the conduct of the Alaska District 104 purse seine fishery prior to Statistical Weeks 31. The annex limiting the catch of sockeye salmon through Week 30 in District 104 expired in 1993. The catch limit was in effect only through Week 30 because in District 104 the abundance of sockeye salmon was historically highest during this early portion of the season while the abundance of pink salmon was usually highest during the later portion of the season.

Alaska Department of Fish and Game's management intent was to maintain early season stock assessment opportunities, allow fishermen the opportunity to harvest domestic stocks, to allow for standard fishing periods, to distribute the fishing fleet, and to coordinate purse seine fishing opportunities throughout Southeast Alaska. In order to achieve these objectives, openings in District 104 were based on the observed abundance of salmon and the number of vessels fishing in the district. For the 1998 season, fishing time allowed in the district would not exceed the amount of fishing time allowed in District 101 and 102 nor exceed the 1985-1996 average pre-Week 31 hours fished in District 104.

The initial Week 28 (July 5-11) purse seine opening in District 104 was limited to 8 hours while at the same time Districts 101 and 102 were opened for 15 hours to allow assessment of salmon abundance on the outer coast while limiting the catch. In this initial opening, sockeye abundance was below average while pink salmon were relatively more abundant in Districts 101 and 102. Fishing time in District 104 continued to be limited with a single 12-hour opening allowed in each of Weeks 29 and 30 (July 12-18) versus twice-weekly 15-hour openings in Districts 101 and 102. Total fishing time through Week 30 (July 25) was 32

hours in District 104 and 75 hours in Districts 101 and 102. In response to more time and better catches in Districts 101 and 102 fishing effort shifted; the number of boats fishing in District 104 fell from 57 initially to 38 in Week 30 while boats fishing in Districts 101 and 102 rose from 54 to 144.

The average number of hours, days, and boat-days fished pre-Week 31 in years 1985-1998 is down 33 to 69% compared to the 1980-1984 period. The sockeye harvest is also down 15% despite an increase in sockeye availability in recent years; the average sockeye catch/boat-day has increased 180%.

% Change	-55%	-33%	-43%	-69%	-15%	180%

Through Week 30 the 1998 District 104 purse seine fishery harvested a total of 198,821 salmon of which 87,956 (44%) were chum salmon, 72,565 (36%) were pink, 20,906 (11%) were coho, and 17,394 (9%) were sockeye.

Over 97% of the 1998 purse seine salmon catch in District 104 purse occurred after Week 30 and 87% of this catch was pink salmon. Beginning in July 26 (Week 31) District 104 was open the same dates and hours as purse seine fishery openings in Districts, 101, 102 and 103. In Weeks 31 and 32, two weekly openings of 15 and 39 hours each were allowed, after which the fishery went to a two-day-off schedule (39 hour openings) until District 104 closed on August 25 (Week 35).

The 1998 District 104 purse seine salmon catch totaled 6,797,459 of which 5,831,320 86% were pink salmon, 487,230 (7.2%) were sockeye, 369,207 (5.4%) were chum, 102,671 (1.5%) were coho and 7,031 (0.1%) were chinook.

District 101 Tree Point Drift Gillnet Fishery

While the abundance of salmon in the 1998 District 101 gillnet fishery was close to or above historical levels, fishing time in Week 29 was reduced to a 2.5 day opening in response to Canadian concerns over lagging sockeye escapements in the Nass River.

The Treaty calls for an average annual harvest of 130,000 sockeye salmon in the Tree Point gillnet fishery. The preliminary estimate of total sockeye harvest in 1998 is 169,686 fish.

Year	Annual Harvest	Avg. Ann. Harvest	
1985	172,863	172,863	
1986	145,657	159,260

1999 Salmon Forecast for Southern Southeast Alaska

The 1999 pink salmon return to Southeast Alaska is expected to be strong. The Alaska Department of Fish and Game's forecast is for a harvest of between 31 and 51 million pink salmon in all of Southeast Alaska in 1999. Separate forecasts for northern and southern Southeast were not made.

Formal forecasts are not made for species other than pink salmon in Southeast Alaska. However, returns of coho, sockeye, and chum salmon are projected to be good, comparable to the levels observed in recent years. There should be a reasonably strong return of sockeye salmon to McDonald Lake in 1999.

NORTHERN BRITISH COLUMBIA

1998 Salmon Forecast

Area 1 Expectations

Sockeye. There are no significant local sockeye stocks in Area 1.

Pink. A large pink surplus of 1.2 million was expected primarily in Masset Inlet.

Chum. A small gillnet assessment fishery was expected in Masset Inlet.

Area 3 Expectations

Sockeye. An average sockeye return to Canada of 500,000 was expected to provide an Area 3 net catch of 250,000 Nass River sockeye. In addition a catch of 25,000 Skeena sockeye was anticipated for a total catch of 275,000.

Pink. A recent average Nass pink return of 800,000 was expected to provide an Area 3 catch of 450,000. In addition, 300,000 Skeena pinks were expected to be caught in Area 3 net fisheries, for a total catch of 1,100,000 Skeena-Nass pink.

Chum. Area 3 chum stocks appear to be improving but still remain at or below target levels. Little or no targeted fishing was anticipated.

Fishing Plans. Due to coho conservation concerns and the weak sockeye return expected for the Skeena in 1998 the Area 3 net fishery was anticipated to be more terminally located than in recent years.

Area 4 Expectations

Sockeye. The Skeena sockeye return was forecast to be 1,150,000 to Canadian waters providing an Area 4 commercial net catch of 100,000. This is significantly below average as a result of severe parasite problems experienced in 1994 and 1995, which caused pre-spawn mortalities in the Babine Lake system.

Pink. An average Skeena pink return of 3,100,000 was forecast for 1998. This was expected to provide an Area 4 catch of only 500,000 due to coho conservation concerns.

Chum. Skeena chum escapements are severely depressed and chum are only caught incidentally.

Fishing Plans. The key factor in developing the 1998 management plans were domestic management initiatives to reduce the catch of Upper Skeena coho and to a lesser extent Skeena steelhead.

Area 5 Expectations

Sockeye. A catch of approximately 20,000 local sockeye was predicted for Area 5. In addition, a modest catch of Skeena stocks was expected for a total sockeye catch of 32,500.

Pink. A catch of 310,000 Area 5 pinks was expected for 1998 along with 200,000 Skeena pinks for a total of 510,000. This is slightly above average for recent years in Area 5.

Chum. Local chum stocks are depressed, and no surplus was anticipated

Fishing Plans. Area 5 fishing patterns were based largely on Upper Skeena coho conservation concerns and the abundance of Skeena sockeye and pink.

Review of 1998 Fishing Season - Net and Troll Fisheries

Area 1

The Area 1 net fishery can be separated into two distinct fisheries. The fishery on passing stocks (July to mid-August) is concentrated in the Langara Island region off the Northwest corner of the Queen Charlotte Islands. This is predominantly a seine fishery harvesting passing sockeye and pink salmon bound mainly for the Skeena River. Nass, Fraser and Southern Southeast Alaskan stocks are also caught incidentally. The second fishery (mid-August to October) concentrated in Masset Inlet and Naden Harbour is a gillnet and seine fishery for surplus local chum and even-year pink stocks. The weekly 1998 catch statistics for Area 1 gillnet and seine fisheries are provided in Tables 71 and 72. Effort data is expressed in the number of boats fishing during each opening, the hours fished, and the portion of 24-hour days represented by the hours fished.

Area 1 historical (1960-1998) weekly net catch data for passing and local stocks is outlined in Tables 73-82. Effort data is provided for years 1973-1998 in Table 83. A map of the local management sub-areas is included (Figure 4).

The Area 1 terminal gillnet fishery was open for a total of 23 fishing periods between August 17 and October 10, with catches totalling 400 pink and 1,604 chum salmon. The Area 1 seine fishery was open for a total of 4 fishing periods between August 7 and August 24 with catches totalling 9,534 sockeye, 142,258 pink and 1,070 chum salmon. Due to conservation concerns for Upper Skeena coho in 1998 the only non-terminal area fishery was an experimental seine fishery for three vessels on August 8 for 15 hours.

Weekly troll catch data for Area 1 sockeye, pink, chum, chinook and coho for 1995-1998 are provided in Appendix A, Tables A-7 to A-11.

Area 3

Management units (sub-areas) of Statistical Area 3 are outlined in Figure 5. In recent years, the Area 3 sockeye gillnet fishery has started in mid-June. From 1963 to 1993 in-season escapement was determined by the Nass River gillnet test fishery. Since 1994 in-season escapement estimates have been provided by the Nisga'a fishwheel operations conducted in the lower Nass River approximately five miles upstream from the old Nass test fishery site. In addition to the fishwheel estimates, catches in local Native food fisheries, and Canadian and Alaskan commercial fisheries were utilised in determining Nass sockeye run strength.

In general the Area 3 net fishery is managed for Nass sockeye salmon until mid-July after which the outer Area 3 fishery is managed based on Nass and Skeena pink and Skeena sockeye stock abundance. The inside Area 3 net fishery is managed for Nass sockeye, pink and chum abundance from mid-July to late August or early September. In 1998 all Area 3 net fisheries operated with a non-retention/non-possession restriction for coho and were further restricted to daylight only fishing times.

Weekly 1998 hailed catch data by gear type for Areas 3(1-4), 3(7-17), sub-areas 3-11, 3-17 and total Area 3 are presented in Tables 84 to 91. Prorated historical (1963-1998) weekly catch information for gillnets and seines in sub-areas 3(-1), 3(2-4) and 3(7-17) and total Area 3 are provided in Tables 95 to 121. Annual effort data for Area 3 for the years: 1973-1998 is shown in Table 83. In addition, annual effort data for these same years for sub-areas 3(1-4) and 3(7-17) are provided in Table 122.

The 1998 Area 3 gillnet fishery began on June 18 (Week 25) with one 16 hour opening to assess Nass River sockeye run strength. Effort levels were well below average as a result of low expectations for northern fishing opportunities coupled with federal programs to reduce the commercial fishing fleet to address Upper Skeena coho conservation concerns. Sockeye catches were normal for this time of year and escapement levels as determined by the Nisga'a fishwheels suggested the Nass return was developing as expected pre-season.

During Weeks 26 and 27 four and three 16 hour fishing periods respectively were scheduled for gillnets in Area 3. Normally the west side of Dundas Island (3-1W) would open at this time however coho conservation concerns resulted in this area being closed for the season. Sockeye and chum catches were above average while effort levels remained well below average. During the latter portions of Week 27 sockeye escapements to the Nass River began to decline resulting in only three fishing periods that week.

In Weeks 28, 29 and 30 it became apparent that the Nass sockeye return was actually much weaker than anticipated as escapement into the Nass River began to fall well below desired levels as the season progressed. As a result fishing times for the gillnet fleet was reduced to two periods per week in Weeks 29 and 30 and sub-area 3-12 was closed to allow for Nass sockeye escapement to improve.

For the remainder of the gillnet season fishing effort was directed on the surplus chum stocks returning to the Nass area with fisheries occurring in Observatory Inlet and Portland Canal and a small portion of Portland Inlet. The gillnet fishing season was terminated on August 24.

The Area 3 seine fishery began on July 12 (Week 29) with one 15 hour and one 3 hour opening for the week. Due to Upper Skeena coho concerns the west side of Dundas Island was closed to fishing for the season and sub-areas 3-1E, 3-2, 3-3, 3-4 and the outer half of 3-7 were closed to fishing on July 16. In addition, concerns for Nass sockeye escapements at this time further restricted available fishing areas in Weeks 29 and 30. As a result seine effort was down considerably from average while catches of chum and pink salmon were reasonable to good for the limited fishing times and areas available.

For the remainder of the season seine effort was focused on harvesting the surplus chum returns to Area 3 while trying to minimise the impacts on Nass sockeye and Area 3 pinks which were also weaker than expected pre-season. The seine fishery was terminated for the season on August 24.

For gillnets there was a total of 16.4 days fishing, while seines fished for 9.3 days. The gillnet and seine sockeye catches of 89,418 and 17,116 respectively were well below expected levels. The catch of pink salmon by gillnets (47,933) and seines (308,972) was also well below the anticipated harvest as returns to Canada were much weaker than anticipated. Of the total Area 3 pink net catch, 17 percent (60,696) was taken in outside management units 3(1-4). This is well below the pre-treaty (1973-1984) average of 73 percent and 1985-97 average of 64 percent. The total Area 3 seine effort of 203 boat days is well below the pre-treaty average (1973-1984) of 1,102 boat days and Treaty period average (1985-97) of 1,338 boat days. In 1998, 15.8 percent of the total seine effort was expended in management units 3(1-4), which is well below the 1973-1984 pre-Treaty average of 68 percent and Treaty period average of 75 percent.

Final sockeye escapement estimates to the Nass were at or above target for most stocks with 163,925 counted through the Meziadin Fishway and a very preliminary estimate of 200,000 for all of Area 3.

Pink escapements to Area 3 totalled 175,000 and were generally below target levels for all stocks. Chum escapements to Area 3 were greatly improved in 1998 with an estimate of about 70,000. Table 123 presents very preliminary escapements for 1998 and Table 124 provides historical annual escapements for Area 3.

Weekly troll catch data for Area 3 sockeye, pink, chum, chinook and coho for 1995-1998 are provided in Appendix A, Tables A-7 to A-11.

Area 4

The 1998 fishing plan was developed primarily to address concerns for Upper Skeena coho stocks. Skeena sockeye returns were forecast to be poor with limited fishing opportunities anticipated pre-season. Inseason abundance is determined by the Skeena test fishery, harvest rate and CPUE models, native food fish catches and commercial catches in Area 4 and other fishing areas in Northern BC and in Southern Southeast Alaska.

Summaries of the 1998 gillnet and seine weekly catch and effort are provided in Tables 125 and 126. Area 4 historical weekly catch information by gear type for 1960-1998 is provided in Tables 127-136.

The Area 4 gillnet fishery began on June 9 (Week 24) with one 16 hour opening scheduled to harvest Skeena chinook salmon. Effort levels were below average for this fishery as a result of the actions taken to reduce the fishing fleet for coho conservation. In the ensuing Weeks (25 and 26) similar openings were provided. The total catch of chinook in these three openings was 1,137.

Beginning on June 29 (Week 27) the first gillnet opening was scheduled to harvest Skeena sockeye. During this week two 16 hour fisheries occurred with catches and effort being well below average on both days. In the next two weeks a similar fishing pattern occurred with two fishing periods per week during daylight times. The gillnet season in Area 4 was terminated on July 18.

Due to the poor return of both sockeye and pink salmon to Area 4 in 1998 there were no openings scheduled for seines.

For gillnets in 1998 there was a total of 5.9 fishing days with a total of only 1,041 gillnet boat days compared to the 1988-97 average of 23.6 fishing days and 10,593 gillnet boat days.

The total gillnet catch of sockeye was 84,803 while the pink catch was 17,136, both being some of the lowest catches on record for each species.

The preliminary Skeena sockeye escapement estimate of 525,000 is well below the spawning target of 900,000. Both the wild and enhanced stocks were below target. The Skeena pink escapement estimate is 300,000 well below the minimum escapement target of 1.0 million while the chum escapement was estimated to be 20,000, also below target. Table 123 provides the preliminary 1998 spawning escapements for Area 4 and Table 137 the annual escapements from 1966 to 1998.

Weekly troll catch data for Area 4 sockeye, pink, chum, chinook and coho for 1995-1998 are provided in Appendix A, Tables A-7 to A-11.

Area 5

Management of the Area 5 fishery during July is based on Skeena sockeye abundance with closures to protect depressed local sockeye stocks. From late July to early August, the fishery targets Skeena pink stocks which use Area 5 as a migration route. In mid to late August, fisheries are managed for local pink stocks.

Tables 138 and 139 provide the weekly total Area 5 catch and effort for 1998. Catch information by gear type for 1960-1998 is provided in Tables 140-149 for total Area 5.

In 1998, the gillnet fishery in Area 5 began on June 29 (Week 27) with two 16 hour fishing periods scheduled. Due to the poor return of Skeena sockeye and pink salmon the Area 5 fishery produced below average catches for all species. The gillnet fishery was terminated on July 12.

Seine fishing in Area 5 was also severely restricted in 1998 with only one opening occurring on July 12 for 15 hours. There was a total of 3.3 days open to gillnet fishing in 1998 with a total of 47 gillnet boat days of effort compared to the 1988-97 average of 20.8 days fishing and 343 boat days of effort. Seines were permitted to fish for 0.6 days with 4 boat days of effort compared to the 1988-97 averages of 15.5 days fishing and 192 boat days of effort.

The total sockeye harvest of 3,674 by gillnets and 180 by seines are both well below recent averages. The total pink harvest of 870 by gillnets and 600 by seines are also well below recent averages.

Preliminary 1998 escapement information for Area 5 is provided in Table 123 and historical spawning escapements are provided in Table 150.

Weekly troll catch data for Area 5 sockeye, pink, chum, chinook and coho for 1995-1998-12-20 are provided in Appendix A, Tables A-7 to A-11.

Area 1 Pink Troll Fishery

The Area 1 pink troll fishery did not occur in 1998 due to the severe conservation concerns for Upper Skeena coho. There was a very limited troll fishery in the Langara Island portion of Area 1 from mid-September to early October during which time no pink salmon were harvested. There was no trolling in the A-B line area in 1998. Table 151 illustrates the Area 1 weekly troll catches for 1998 and Table 152 outlines the annual (1973-1998) Area 1 troll catches.

Management Performance Relative to Treaty Requirements

Areas 3 (1-4) and 5-11 Pink Net Catch

The current average annual pink harvest from 1985-1998 in the treaty area (subarea 3(1-4) and 5-10, 5-11, 5-12, 5-13) is 1,694,737. The following table illustrates the catch in these sub-areas:

	Annual Harvest	Average Annual	
Year	3(1-4)+5(-10,-11,-12)	Harvest Since 1985	
1985	1,246,826	1,246,826	
1986	1,617,580	1,432,203	
1987	1,677,902	1,514,103	
1988	423,106	1,241,354	
1989	1,845,823	1,362,247	
1990	844,573	1,275,968	
1991	5,765,610	1,917,346	
1992	1,107,575	1,816,124	
1993	1,405,688	1,770,520	
1994	287,482	1,622,217	
1995	3,194,280	1,765,131	
1996	1,145,531	1,713,498	
1997	471,807	1,617,983	
1998	60,696	1,506,749	

Area 1 Pink Troll Fishery

There was no specific arrangement for the Area 1 troll fishery in 1998. Upper Skeena coho conservation actions resulted in an Area 1 pink troll catch of 0 in 1998. The pattern of total Area 1 weekly pink catch in 1998 is illustrated in Figure 12.

1999 Salmon Forecast Northern British Columbia

Introduction

Expectations and fishing plans for 1999 are still preliminary. Specific opening dates and fishing patterns are determined through consultations with industry and since this process has not yet been completed it is too early to provide details. A summary of the forecasts for Areas 1, 3, 4 and 5 are provided in Table 153.

Area 1 Expectations

Sockeye. There are no significant local sockeye stocks in Area 1

Pink. 1999 is an off cycle year for Area 1 pink stocks.

Chum. A small gillnet assessment fishery is expected in Masset Inlet

Fishing Plans The fishing plans for net fisheries have not been established

Area 3 Expectations

Sockeye. An average sockeye return to Area 3 of 550,000 is expected to provide an Area 3 net catch of 300,000. Due to the poor return of Skeena sockeye in 1999 little or no contribution to the Area 3 sockeye catch is expected in 1999.

Pink. A Nass pink return of 550,000 is expected to provide an Area 3 catch of 200,000. No contribution is anticipated by Skeena pink stocks, as the 1999 forecast is very poor.

Chum. Area 3 chum stocks remain below target levels. No targeted fishing is anticipated.

Fishing Plans. A very modest sockeye and pink fishery are anticipated in Area 3 in 1999.

Area 4 Expectations

Sockeye. The Skeena sockeye return is forecast to be 600,000 to Canadian waters. This is well below the escapement target of 900,000 spawners hence there will is no harvest of Skeena sockeye anticipated for 1999.

Pink. Skeena chum escapements are depressed and chum are only caught incidentally.

Chum. Skeena chum escapements are depressed and chum are only caught incidentally.

Fishing Plans. Domestic management initiatives to respond to coho conservation concerns and very poor sockeye and pink returns will be the key factors in developing 1999 management plans.

Area 5 Expectations

Sockeye. Little or no catch of local sockeye is predicted for Area 5 in 1999. A fishery on Skeena stocks is not anticipated.

Pink. Local Area 5 pink returns in 1999 are expected to produce a surplus of about 250,000 for harvest.

Chum. Local chum stocks are depressed, and no surplus is anticipated.

Fishing Plans. Area 5 fishing patterns will be based largely on the abundance of local sockeye and pink stocks, Skeena coho conservation concerns and the poor returns of Skeena sockeye and pink.

^a Spawning escapement equals total escapement minus egg take and/or weir mortalities.

b Un-validated weir count.

^c Expanded foot survey count.

Mark-recapture estimate. Returning adults were marked at the weir and recovered in Buschmann and Cobb Creeks. Actual weir counts were 2,312 in 1986, 65,737 in 1992, 11,312 in 1993, 8,386 in 1994, and 3,422 in 1995.

^e Weir count validated by backup mark-recapture estimate.

^a A total of 9,916 chum salmon were counted through a weir on Fish Creek in 1991, 46,771 in 1992, 60,447 in 1993, 32,322 in 1994, and 9,742 in 1995.

The total escapement of chum salmon into Marx Creek was estimated using area-under-the-curve methods to be 17,597 in 1992, 36,303 in 1993, 9,535 in 1994, and 1,003 in 1995.
